Education

Sep 2016 - Jun 2020 The Engineering College of Chengdu University of technology • Third Place in CCTV National Speech Contest (2018) • School Science and Technology Innovation Star (2019)	Electronic Science and Technology (Bachelor)
Sep 2023 - Present Camosun College • AWS Certified Solutions Architect - Associate(2024) • Dean's Hornor Roll (2024, 2025)	Information and computer Systems(Diploma)

Work Experience

ExplorationSites (Oct 2025 - Jan 2026) • Designed and implemented a relational database architecture for a junior mining AI agent, including normalized tables, performance-optimized indexes, SQL functions, and triggers; built a pgvector-based vector database in Supabase to support high-quality semantic retrieval; Managed user authentication using Supabase Auth. • Developed a Next.js front end for the AI agent and successfully deployed it on client WordPress websites using Shadow DOM, ensuring style isolation and seamless integration without UI conflicts. • Built the agent backend with LangGraph on top of Supabase and the vector database, enabling robust handling of time-sensitive, ranking-based, and semantic investor queries, with intelligent fallback to Tavily web search when internal data is unavailable. • Utilized LangSmith for end-to-end tracing, debugging, and optimization of agent reasoning, tool usage, and response. • Automated ingestion and embedding of PDF news releases, MD&A, and financial statements using n8n workflows, creating a scalable and maintainable data pipeline for continuous knowledge updates.	Full Stack AI developer
PAX Global Technology (May 2023 - Aug 2023) • Developed Python scripts (pandas, numpy) to automate the analysis of company expenses, revenue trends, and reimbursement patterns, reducing manual reporting time by 30%. • Cleaned and transformed raw financial data (purchase orders, delivery logs) into structured formats for monthly KPI dashboards using Python, enabling data-driven cost optimization.	Python Engineer
PROITAV Technology Limited (Sep 2022 - May 2023) • Assisted senior analysts in building interactive dashboards (Plotly, Matplotlib) to visualize sales trends • Wrote SQL queries to extract and transform data from company databases for analysis • Helped maintain Python scripts for processing 100K+ records of transaction data weekly	Python Engineer

Internship experience

AB Maker (April 2025 - Aug 2025) • Drafted the database schema for a new Learning Management System (LMS) using Excalidraw, and created tables based on the finalized schema with appropriate column properties and relationships. • Collaborated with teammates to implement UI designs using Trello for task tracking and GitHub for version control. • Reviewed teammates' code and approved pull requests after quality checks before merging into the main branch. • Developed the lecture management system, enabling instructors to create lectures with text, images, and YouTube videos; Built the quiz management system, allowing instructors to create quizzes and students to take them	Full Stack Developer
---	-----------------------------

Project experience

Learning Management System with Langchain+OpenAI - https://language-cosmos-lms.vercel.app/ • Developed using Next.js for front end and backend, supabase for authentication and database, stripe for payment • Integrated with Langchain built AI agent, so instructors can simply click one button to use AI to generate quiz based on the lecture content stored in database • A full fledged system where instructors can use to create class, course, classes, quiz etc. promote pages also included
